WORK EXPERIENCE

Freelance Full Stack Developer|Self-Employed

(Jan 2026 – Present)

- Collaborating on MERN stack projects with React.js, Node.js, TypeScript, and MongoDB.
- Developing secure REST APIs, authentication, and real-time features.
- Working on frontend development, backend integration, database design, and deployment.
- Following Git-based workflows and collaborating on feature implementation and bug fixes.

Full Stack Developer Intern | DGEN

(May 2025 – Oct 2025)

- Built **AI-powered and business-focused web applications** using the MERN stack, transforming client requirements into scalable full-stack solutions.
- Implemented **secure authentication, RBAC, third-party API integrations, and reusable backend modules** to improve application reliability and maintainability.
- Optimized frontend performance, enhanced backend scalability, collaborated in agile development, and contributed to feature planning, implementation, testing, and deployment.

PROJECTS

AllSpark – Online Coding & Evaluation Platform [GitHub](#)

[Node.js](#), [Express.js](#), [React.js](#), [MongoDB](#), [Kafka](#), [Redis](#), [Docker](#), [WebSockets](#), [JWT](#), [Judge0](#)

- Architected an event-driven microservices platform for coding problems, competitive contests, automated submissions, live leaderboards, administration, and support workflows.
- Built independent services behind an API Gateway using Kafka for asynchronous communication, Redis for caching and leaderboard updates, and JWT, OTP, and RBAC for secure access control.
- Integrated Judge0-compatible sandboxed code execution and WebSocket-based live updates, and containerized the complete development infrastructure using Docker Compose.

DigiPandit – Full Stack Spiritual Services Platform [Live](#) || [GitHub](#)

[React.js](#), [Redux Toolkit](#), [Tailwind CSS](#), [Node.js](#), [Express.js](#), [MongoDB](#), [Socket.IO](#), [JWT](#), [PayU](#), [Cloudinary](#)

- Built and deployed a Hindi-first full-stack platform for pandit discovery, puja bookings, astrology and Kundali experiences, guided Hawans, spiritual products, checkout, and order management.
- Developed role-based User, Pandit, and Admin workflows with email verification, JWT authentication, booking management, profile controls, validation, rate limiting, and protected APIs.
- Implemented a structured Hawan Guide with safety confirmation, required materials, step-by-step rituals, progress tracking, and source attribution, alongside persistent chat, payment, and media workflows.

Pulse – Private Real-Time Messenger [Live](#) [GitHub](#)

[React.js](#), [TypeScript](#), [Node.js](#), [Express.js](#), [MongoDB](#), [Redis](#), [Socket.IO](#), [Web Crypto API](#), [Docker](#)

- Developed a production-minded messaging monorepo supporting direct and group conversations, presence, typing indicators, delivery/seen states, reactions, unread counts, disappearing messages, and encrypted media sharing.
- Implemented browser-side encryption for direct messages with client-held private keys, ciphertext-only server persistence, public device-key distribution, and local decrypted message search.
- Secured authentication using email verification, rotating refresh tokens, HTTP-only cookies, device-aware sessions, and session revocation, with Redis-backed real-time communication and typed shared contracts

SKILLS

Languages: JavaScript , TypeScript

Frontend: React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Vite

Backend: Node.js, Express.js, REST APIs, JWT, RBAC, Socket.IO

Database: MongoDB, Redis

DevOps: Docker, Docker Compose, Git, GitHub, Kafka, Postman

Cloud: MongoDB Atlas, Cloudinary

Core Concept:Data Structures & Algorithms (JAVA), Microservices, Distributed Systems, Event-Driven Architecture, API Gateway, Authentication & Authorization, Real-Time Systems, RESTful API Design, Caching, System Design

EDUCATION – B.Tech, Computer Science Engineering (IoT) | SRGI, Jhansi | 2022–2026
